HIGH SPEED RACING SKI (Model R-J)

After two years of testing, design modifications, conferences with top ski-racers and other knowledgeable persons in the ski-racing sport this ski was developed. It was generally agreed that this type of ski and construction was the only present day answer for higher racing speeds and difficult water conditions.

It is of the 'long-ski' type, 6'8" in length with specially shaped and molded high speed bottom. A Formica covered laminated construction is used, with the shape locked in permanently with new 'Multi-Lam' technique. The original design shape on each ski is the same and stays that way.

A unique feature of the ski is the drop-thru 'D-Blade' racing fin, which has a detachable blade for easy replacement and perfect alignment to original mounting position.

The ski comes complete with two 'Mr. M' wrap-around bindings, or with fin mounted and no bindings.

As with our other products, we are combining the custom builders' art with modern production methods to insure quality, accuracy, reasonable delivery time.

SLALOM SKI FIN "DROP-THRU"

This fin is a new formula, precision cast aluminum, and has been designed for minimum drag and maximum effect of blade surface.

Mounting plate and fin are one piece. The mount goes to the top of the ski and the blade 'drops-thru' the ski, secured by aluminum bolts and cap nuts.

Competitive skiers have long been aware of the advantage of this type of fin and have been 'using one of a kind', individually manufactured "Drop-Thru" fins for many years.

Maherajah has been a pioneer over the years in the manufacture of this type of fin, and their new "Drop-Thru" Slalom Ski fin has been used successfully in both National and World Competition.

To our knowledge this is the only production "Drop-Thru" fin immediately available on the market today.
